## Nvis 7089BD

All AC & DC Machines are optional

**Nvis 7089BD Electrical Workstation** offers an excellent approach to the teaching of Electrical Machines principles by introducing a unique modular designed control unit. It provides flexibility for the students to carry out experiments over AC and DC Machines using a large selection of Industry standard inbuilt components.

Electrical Machines is one of the most important area of study as it helps users to understand the operational characteristics and working of AC and DC Machines. Nvis 7089BD enables user to put their theory knowledge into practice with ease. There is an additional facility to make wireless connection on workstation with computer and to monitor real time electrical parameters using computer interfacing software. Users can also observe a real time graph between any of the AC and DC electrical parameters on computer.

Workstation comprises of separate AC and DC measuring sections equipped with all the necessary instruments such as digital meters, facility to connect AC and DC Supplies along with protection devices such as Fuses, MCB's, Supply Indicators, etc. There are multiple buses provided on the Workstation to make external connections while performing AC and DC Machines Experiments.

The design of the control unit ensures to get the highest quality practical experience to user. All the necessary protective measures are taken to avoid fault or danger.

**Note:** All AC & DC Machines along with supporting accessories are available optionally

### Features

- Compatible for Machines upto 3HP
- Equipped with Measurement Facilities for Experimentation on AC Machines, DC Machines and Transformers
- Separate AC and DC Measuring Sections
- Diagrammatic representation of AC and DC Machines for better understanding
- Rust Free Powder Coating Paint
- Standard BS terminals, patch cords for safety purpose
- Terminals provided to obtain Three Phase Fixed as well as Variable AC and DC Supplies with suitable protection
- High Quality Digital Tachometer for RPM Measurement which is also interfaced with DAQ (Data Acquisition System)
- Motors provided with standard Mechanical Loading Arrangement Facility
- Motors with "aluminum" casted Brake-Drum/Pulley with heat suppression facility
- Machines with Class "B" Insulation
- Flexible shaft coupling arrangement (Lovejoy) for Motor Generator (MG) Sets
- Machines provided with Heavy Duty Base/Channel with suitable interconnection
- Machines provided with suitable protections such as MCB's, Fuses, Motor Generator (MG) Sets provided with coupling protective cover
- Generator with Electrical Loading Arrangement Facility
- Durable good quality spring balance
- Designed by considering all the safety measures

**Note:** All AC & DC Machines along with supporting accessories are available optionally

### Experiments with Nvis 7089B

#### DC Machines (optional)

##### DC Shunt Wound Motor

- Study of Operational Working and Principle of DC Shunt Motor
- Study of running and reversing phenomenon of DC Shunt Motor
- Study of No Load Characteristic of DC Shunt Motor
- Study of Load Characteristic of DC Shunt Motor
- Study of speed control of DC Shunt Motor using armature voltage control and flux field control method
- Study and Determine the losses of DC Machine and correspondingly calculate the efficiency of DC Machine by Swinburn's Test Method

##### DC Series Wound Motor

- Study of Operational Working and Principle of DC Series Motor
- Study of running and reversing phenomenon of DC Series Motor
- Study of Load Characteristic of DC Series Motor
- Study of speed control of DC Series Motor using armature voltage control and flux field control methods

##### DC Compound Wound Motor

- Study of Operational Working and Principle of DC Compound Motor
- Study of running and reversing phenomenon of DC Compound Motor
- Study of Load Characteristic of DC Cumulative-Compound Wound Motor
- Study of Load Characteristic of DC Differential-Compound Wound Motor

##### DC Shunt Wound Generator

- Study of Operational Working and Principle of DC Shunt Generator
- Study and measurement of Open Circuit Characteristic of DC Shunt Generator
- Study and measurement of External Characteristic of DC Shunt Generator
- Study and measurement of Internal Characteristic of DC Shunt Generator

##### DC Series Wound Generator

- Study of Operational Working and Principle of DC Series Wound Generator
- Study and measurement of Open Circuit Characteristic of DC Series Generator
- Study and measurement of Load Characteristic of DC Series Generator
- Study and verify the Field Test of DC Series Machine and correspondingly determine the efficiency of DC Series Motor and Generator at any desire load

##### DC Compound Wound Generator

- Study of Operational Working and Principle of DC Compound Wound Generator
- Study and verify the Load Characteristics of Long Shunt Cumulatively Compound Generator
- Study and verify the Load Characteristics of Short Shunt Cumulatively Compound Generator
- Study and verify the Load Characteristics of Long Shunt Differentially Compound Generator
- Study and verify the Load Characteristics of Short Shunt Differentially Compound Generator

##### Single Phase Capacitor Start Induction Motor

- Study of Operational Working and Principle of Single Phase Induction Motor
- Study of Running and Reversing of Single Phase Induction Motor
- Study of the No-Load Test in a Single Phase Induction Motor
- Study of the Blocked Rotor Test in a Single Phase Induction Motor
- Study of Load Test in a Single Phase Induction Motor

##### Three-phase Slip Ring Induction Motor

- Study of Operational Working and Principle of Three Phase Slip Ring Induction Motor
- Study of Running and Reversing of Three Phase Induction Motor
- Study of No Load Test in a Three Phase Induction Motor
- Study of Block Rotor Test in a Three Phase Induction Motor
- Measurement of Slip in a Three Phase Induction Motor
- Study of Load Test in a Three Phase Induction Motor

##### Three-phase Squirrel Cage Induction Motor

- Study of Operational Working and Principle of Three Phase Squirrel Cage Induction Motor
- Study of Running and Reversing of Three Phase Induction Motor
- Study of No Load Test performed in a Three Phase Induction Motor
- Study of Block Rotor Test performed in a Three Phase Induction Motor
- Measurement of Slip in a Three Phase Induction Motor
- Study of Speed-Torque characteristics in a Three Phase Induction Motor

##### Three Phase Salient Pole Synchronous Motor

- Study of Operational Working and Principle of Three Phase Synchronous Motor
- Study of V curve of Three Phase Synchronous Motor
- Study of Inverse V curve of the Three Phase Synchronous Motor

##### Three Phase Transformer:

- Study of Open Circuit test of Three-Phase Transformer
- Study of Short Circuit Test of Three-Phase Transformer

##### Three Phase Salient Pole Synchronous Generator

- Study of Operational Working Principle of Three Phase Synchronous Generator
- Study and Measurement of Positive Sequence Impedance of Three Phase Synchronous Generator
- Study and Measurement of Negative Sequence Impedance of Three Phase Synchronous Generator
- Study and Measurement of Zero Sequence Impedance of Three Phase Synchronous Generator
- Study of short circuit characteristics (SCC) of three Phase Synchronous Generator
- Study of open circuit characteristics (OCC) of three Phase Synchronous Generator
- Study and measure of voltage regulation of Three Phase Synchronous Generator using EMF Method
- Study and measure of voltage regulation of Three Phase Synchronous Generator by Direct Loading

##### Single Phase Transformer:

- Study of Single-Phase Isolation Transformer
- Study of Single-Phase Step Up Transformer
- Study of Single-Phase Step Down Transformer
- Study of Subtractive Polarity of Single Phase Transformer
- Study of Additive Polarity of Single-Phase Transformer
- Study of Open Circuit test of Single-Phase Transformer
- Study of Short Circuit Test of Single-Phase Transformer
- To determine the Efficiency and Voltage Regulation of a Single-Phase Transformer by direct loading at different loading condition.

## Nvis 7089BD

**Nvis Electrical Data Acquisition System** is a versatile solution that allows high quality measurements for all Electrical Parameters and is suited for all types of Engineering Laboratories. Electrical Data Acquisition System provides wireless measurements of Single and Three Phase AC as well as DC Parameters measurements with high accuracy.

Nvis Electrical Data Acquisition System includes three inputs each for Voltage and Current, two inputs each for DC Voltage and DC Current to measure an entire Three Phase Parameters and DC Parameters such as AC and DC Voltage, AC and DC Current, Active Power, Reactive Power, Apparent Power, Power Factor, Frequency, etc. along with Over Load Protection Indicators and buzzer at the same time. All these parameters will be displayed on the PC Software screen provided with the product.

Nvis Electrical Data Acquisition System is compatible for three phase/three wire and three phase/four wire configurations. User can also plot a real time graph between any of these parameters on computer through the facility of wireless connectivity.

## Features

- Electrical Data Acquisition System is compatible for Motors upto 3HP
- Real Time monitoring of electrical parameters using computer Interface Software
- Curve can be plotted between any of the two electrical parameters along with its calculation done on computer
- Facility to store plotting curve reading for further reference
- Microcontroller based accurate and reliable design
- Single Phase Parameters Measurement
  - 3 AC Voltage Inputs
  - 3 AC Current Inputs
- Corresponding Active Power, Reactive Power, Apparent Power, Frequency, Power Factor and Angle
- 2 DC voltage Inputs
- 2 DC current Inputs
- Three Phase Parameters Measurement
  - Line to Neutral Voltage
  - Line to Line Voltage
  - Line Current
  - Active Power
  - Reactive Power
  - Apparent Power
  - Frequency
  - Power Factor
- CT is used as Current Transducer
- Fully isolated measurement
