

# Intermediate Level Water Level Controller cum Motor Timer Nvis 04D

This circuit aids, when we forget to switch off the motor pushing water into the overhead tank (OHT) in our households. As a result, water keeps overflowing until we notice the overflow and switch the pump off. It controls 'on' and 'off' conditions of the motor depending upon the level of water in the tank.

## Features

- Descriptive operating manual with procedure.
- Low cost and Easy to operate.
- Circuit Diagram with PCB layout for better understanding

## Technical Specifications

DC Power Supply	: 9V battery
Relay	: 5V
DC motor	: 5V
Diode	: IN 4007, 1600V
